Professional Summary

Full Stack & Platform Engineer with 5+ years of experience building scalable, reliable, and transaction-heavy software systems across payments, e-commerce, operational platforms, and distributed workflows. Strong background in TypeScript, JavaScript, Node.js, React, API architecture, database optimization, and event-driven systems. Experienced in owning projects end-to-end from product requirements and architecture design to deployment, monitoring, debugging, and production support. Comfortable working across application, infrastructure, database, and operational layers to build reliable developer and user-facing systems.

Core Technical Skills

Languages	TypeScript, JavaScript, PHP, Python
Frontend	React, React Native, TailwindCSS
Backend	Node.js, Laravel, REST APIs, Webhooks, Event-driven systems
Databases	PostgreSQL, MySQL, MongoDB
Infrastructure	AWS fundamentals, CI/CD pipelines, Git workflows
Architecture	Distributed systems, Service-oriented architecture, Payment systems
Engineering	System design, Debugging, Monitoring, Performance optimization

Professional Experience

Software Engineer — Intrasoft

Feb 2024 – Present · Remote

- Designed and built scalable backend services supporting secure payment processing and real-time transaction verification workflows.
- Developed reliable REST APIs powering production client applications with strong focus on performance, observability, and data integrity.
- Built webhook-driven event processing and reconciliation pipelines to handle asynchronous payment provider events safely and reliably.
- Owned features end-to-end across architecture design, implementation, deployment, debugging, monitoring, and production support.
- Improved system reliability and API responsiveness by identifying architectural bottlenecks and optimizing database queries.
- Collaborated across engineering and business stakeholders to translate operational and compliance requirements into scalable technical systems.

- Contributed to developer productivity and release reliability through improved deployment workflows and engineering practices.

TypeScript, Node.js, MySQL, REST APIs, Distributed Systems, CI/CD, AWS

Full Stack Engineer — Intrasoft

Feb 2023 – Jan 2024 · On-site

- Built internal and client-facing web applications using React, TypeScript, and Node.js.
- Designed reusable frontend and backend modules to accelerate feature delivery across multiple products.
- Collaborated with stakeholders to transform product requirements into scalable technical solutions.
- Implemented responsive interfaces and backend services supporting operational and transaction-heavy workflows.
- Participated in architecture discussions, debugging, testing, deployment, and production support.

React, TypeScript, Node.js, Software Design, System Architecture

Web Developer — GoWork

Aug 2022 – Feb 2023 · Remote

- Architected and delivered end-to-end software solutions for e-commerce and operational platforms.
- Designed backend systems for payments, subscriptions, inventory management, and order lifecycle workflows.
- Built scalable APIs for catalogs, carts, transactions, and user management with focus on maintainability and reliability.
- Integrated third-party payment systems and implemented secure authentication and authorization flows.
- Worked independently with distributed teams to gather requirements, design architectures, and deliver production-ready applications.

PHP, MySQL, APIs, Payment Systems, System Design

Selected Projects

Webhook-Driven Payment Reconciliation System Designed a normalized event-processing abstraction for asynchronous payment reconciliation workflows. Implemented idempotency controls, retry orchestration, transaction state management, and audit-safe persistence. Built reliable event-driven workflows capable of handling delayed, duplicated, and out-of-order payment provider callbacks. **Ecowaste Smart Waste Management Platform** Designed a multi-role operational platform supporting waste pickup workflows, recycler operations, subscriptions, analytics, and notifications. Built scalable APIs and React-based dashboards supporting operational monitoring and transaction workflows. Designed database schemas and backend architecture for location-based operational systems. **Jewelry POS + E-commerce + Image Search Platform** Built centralized inventory, barcode, POS, and e-commerce systems with image similarity search functionality. Implemented scalable product catalog management and operational workflows for inventory and sales management. Designed React interfaces optimized for fast search, checkout, and inventory operations.

Education

Bachelor of Science (BSc) in Computer Science

National Open University of Nigeria (NOUN), Lagos, Nigeria

2019 – Present

National Diploma

The Polytechnic of Ibadan, Ibadan, Nigeria

2015 – 2017
